## b. Display color vs. input data signals

The brightness of each primary color (red, green and blue) is based on the 8-bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

## e. Backlight driving conditions

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark	Remark
Lamp voltage	VL	-	700	-	Vrms		Note 1, 2
Lamp operation current	IL	2	7.5	8	mA		Note 3
Lamp starting voltage	VLstart	1300	-	-	Vrms	T = 25°C	Note 4,5,6,7
		1700	-	-		T = 0°C	Note 4,5,6,7
Frequency	F	40	-	60	KHZ		Note 7
Lamp life time		40000		-	Hr		Note 8

Note:•• The waveform of the voltage output of inverter must be area-symmetric and the design of the inverter must have specifications for the modularized lamp. The performance of the Backlight, such as lifetime or brightness, is greatly influenced by the characteristics of the DC-AC inverter for the lamp. All the parameters of an inverter should be carefully designed to avoid producing too much current leakage from high voltage output of the inverter. When designing or ordering the inverter please make sure that a poor lighting caused by the mismatch of the Backlight and the inverter (miss-lighting, flicker, etc.) never occurs. If the above situation is confirmed, the module should be operated in the same manners when it is installed in your instrument.

Note 1: Specified values are for a single lamp.

Note 2: Operating voltage is measured at the condition of  $T_a = 25 \pm 2^\circ\text{C}$ . The variance of the voltage is  $\pm 10\%$ .

Note 3: The degree of unbalance: less than 10%

The ratio of wave height: less than  $\sqrt{2} \pm 10\%$

$I_p$ : high side peak

$I-p$ : low side peak

The degree of unbalance =  $|I_p - I-p| / I_{rms} \times 100(\%)$

The ratio of wave height =  $I_p$  (or  $I-p$ ) /  $I_{rms}$

Lamp should be completely turned on.

SPEC NO. MT185GW01 V.A

PAGE 14/23

Note 4: Test equipment: AS-114B

Note 5: The voltage shown above should be applied to the lamp for more than 1 second after startup. Otherwise, the lamp may not be turned on normally.

Note 6: Inverter should provide more than min. value, and then lamp could be completely turned on

Note 7: Lamp frequency may produce interference with horizontal synchronous frequency and this may cause line flow on the display. Therefore lamp frequency shall be detached from the horizontal synchronous frequency and its harmonics as far as possible in order to avoid interference.

Note 8: Life time (Hr) is defined as the time when brightness of a lamp unit itself becomes 50% or less than its original value at the condition of  $T_a = 25 \pm 2^\circ\text{C}$  and  $I_L = 7.5\text{mA}_{\text{rms}}$ .

Note 2: To be measured in dark room after backlight warm up 30 minutes.

Note 3: To be measured with a viewing cone of 2° by Topcon luminance meter BM-5A.

Note 4: Definition of response time:

The output signals of BM-7 are measured when the input signals are changed from “Black” to “White” (falling time) and from “White” to “Black” (rising time), respectively. The response time interval is between the 10% and 90% of amplitudes. Refer to figure as below.

SPEC NO. MT185GW01 V.A

PAGE 16/23

Note 5: Definition of contrast ratio:

Contrast ratio is calculated by the following formula.

$$\text{Contrast ratio (CR)} = \frac{\text{Brightness on the "white" state}}{\text{Brightness on the "black" state}}$$

Note 6: Driving conditions for CCFL:  $I_L = 7.5 \text{ mA}$ , 50 KHz Frequency.

Note 7: Definition of viewing angle

Note 8: Definition white uniformity:

Luminance are measured at the following nine points (P1~P9).

$$\delta_w = \frac{\text{Minimum Brightness of nine points (P1~P9).}}{\text{Maximum Brightness of nine points (P1~P9).}}$$

**E. Safety****(1) Sharp Edge Requirements**

There will be no sharp edges or corners on the display assembly that could cause injury.

**(2) Materials****a. Toxicity**

There will be no carcinogenic materials used anywhere in the display module. If toxic materials are used, they will be reviewed and approved by the responsible InnoLux Toxicologist.

**b. Flammability**

All components including electrical components that do not meet the flammability grade UL94-V1 in the module will complete the flammability rating exception approval process. The printed circuit board will be made from material rated 94-V1 or better. The actual UL flammability rating will be printed on the printed circuit board.

**c. Capacitors**

If any polarized capacitors are used in the display assembly, provisions will be made to keep them from being inserted backwards.

**F. Display quality**

The display quality of the color TFT-LCD module should be in compliance with the Innolux's Incoming inspection standard.

**G. Handling precaution**

The Handling of the TFT-LCD should be in compliance with the Innolux's handling principle standard.
